

## Ink pins

### A cost effective solution to deterring theft

The inkpin can be used in conjunction with any tag or on its own - with a lock, in situations where an electronic tagging system is not a viable option.

- Ink pins **do** break and make a garment unusable if they are forcibly removed and thus provide the perfect benefit denial message. It is rare that there are breakages unless it is being tampered with.
- Ink pins **do not** put off 'honest' customers, the same way that antennas, tags and CCTV do not alienate customers.
- Ink pins **do not** dry up or leak and cannot be frozen in domestic and most commercial freezers. The ink cannot be removed and is completely non toxic. We offer a five-year warranty against leakage and dehydration.

**Ink Pin MW**

**Intrepidye**

#### Specification

Dimensions	Length 16mm x 19mm x 21mm
Shaft	Smooth/serrated
Product code	GIP30112

#### Specification

Dimensions	Length 16mm x 19mm
Shaft	Smooth/serrated
Product code	27223719

The Ink Pin MW is a simple yet effective theft deterrent. The ink is clearly visible and there is a warning sign displayed on the exterior. The ampoules containing the ink, one dark one light, are not under pressure and are made from a non splintering composite. The use of two colours allows the pins to be applied to different coloured garments.

Intrepidye is the ultimate benefit denial deterrent. Any attempt to forcibly remove the Intrepidye will cause the ink cartridge to break, releasing a non-toxic dye, which permanently stains the merchandise. Intrepidye can be used in conjunction with any tag or on its own - with a specially designed Minifo lock, in situations where an electronic tagging system is not a viable option.
