

USB RAT

The USB RAT has been designed to prevent the unauthorized removal of electronic devices that are fitted with a USB port.

The rectangular sensor unit is attached by removing the backing from the self adhesive pad and fixing to a clean adjacent surface. The USB connector is fitted to the device being protected and the sensor is armed by pressing the plunger. If the sensor or wire is removed or damaged, the sensor will emit an audible alarm. The alarm can only be reset by removing the sensor and resetting the device with the reset tool. Spare adhesive pads are available separately.

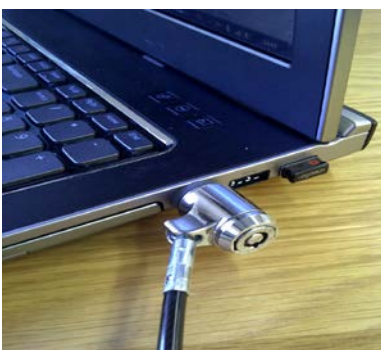

Dimensions:	40mm x 15mm x 15mm
Retracted Length:	600mm
Includes:	Rat USB, pad and reset tool
Product code:	15700

2M USB Lanyard

The 2m USB lanyard with cable lock is an alternative solution, to the prevention against theft, of electronic devices with a USB port.

The cable lock attaches securely into the USB port of your device using an innovative keyed lock. The looped end is secured to a suitable anchor point preventing the equipment from being removed.

Cable Length:	1900m
Cable diameter:	5mm
Includes:	2m USB Lanyard, lock, 2 keys and key cover
Product code:	GLA30062LAN
